

Unique patients during the financial years 18 -2021 by nationality

Figures here are distinct patients placed either in area or out of area by nationality and by year. Many entries have been marked as unknown as this is not a compulsory entry for placements so there are a lot of blank values.

Out of Area Placements:

Year	British	Foreign National	Unknown	Grand Total
18/19	50	34	137	221
19/20	51	37	192	280
20/21	58	32	173	263
Grand Total	159	103	502	764

Data Caveats :

The Nationality field within the Trust's patient administration system (Rio) is used to determine whether a patient is a foreign national. This field is not mandatory on Rio and therefore the field is not always completed, and you will note that there is a cohort of patients as a result for whom we are unable to confirm the nationality for.

We can only provide out of area data for adult acute, picu, secure men's and secure women's services. Therefore, we have used the same services to produce the 'in area' data.

In Area Placements:

Year	British	Foreign National	Unknown	Grand Total
18/19	327	228	924	1479
19/20	303	215	1060	1578
20/21	271	175	971	1417
Grand Total	901	618	2955	4474
