

FOI 0192/2021 Response

Request

I am scientist at the National Physical Laboratory and I am conducting research in to body temperature measurement standards.

As part of this, we are looking to collate information on what brands and models of thermometers are most commonly used throughout the NHS.

I was wondering if you would be able to provide any information on what models of oral, tympanic (in-ear) and forehead thermometers are generally used in hospitals and clinics in your trust (or if you could direct me to someone who may be able to help).

Any assistance that you could provide would be greatly appreciated.

Response

The Trust is currently using the following thermometers:

- Huangshan YASEE Biomedical Inc YS-TWA-1 (FT-100B), infrared (non-contact).
- Zhonshan Jinli electronic (Kinlee) FT3010, infrared (non-contact).
- Medical indicators inc (Tempa Dot) (5532) Oral single use, contact
- Covideien genius 3 (303013) In the ear, contact.
