**System definitions:**
**Assessment and risk management:** Electronic systems to perform patient/clinical assessments and risk management.

**Clinical Portal:** An electronic window that will allow clinicians to view defined information about individual patients in a 'virtual' electronic patient record drawn from information held in different clinical systems. Integrates a variety of products and services in the clinical setting.

**EPR:** An electronic patient/health record is an electronic record of periodic health care of a single individual, provided mainly by one institution. A digital version of a patient's paper chart.

**Finance:** This is a financial management and accounting solution used alongside HR software. Suppliers here include Unit4

**Finance BI and analytics system:** Tools used for transforming and analysing financial and related data sets.

**Medicine management:** A system that manages, records and monitors medicine administration.

**Patient Engagement Portal:** It is a digital platform used by healthcare providers across the system to securely share data and interact with patients/carers to better support/manage patient's health and wellbeing.

**Procurement Software:** Procurement software is a business software that allows enterprises to automate their entire source-to-pay cycle. Right from analysing and managing spends to managing contracts and making invoice payments.

**Video Consultation:** Is a system that is used when a patient speaks to a doctor or healthcare professional using the video camera in their smartphone, tablet or computer.

**Virtual Wards:** Virtual wards, also known as virtual care wards or hospital-at-home programs, are healthcare models that aim to provide hospital-level care to patients in their own homes. These programs typically utilise telehealth technologies, hardware, and remote monitoring systems to deliver medical care and supervision to patients who would otherwise require hospitalization. Please list the different hardware and systems used.
