

Areas of Focus

Identified as areas of focus through data analysis, as areas where diagnosis is lower than the predicted Dementia Diagnosis Rate for local population aged over 65.

The identified postcode areas are:

The underrepresented communities include:

Caribbean men

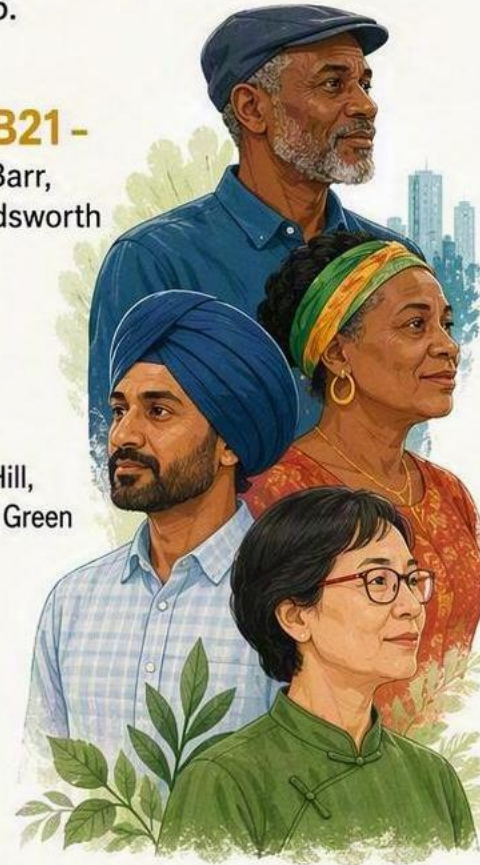

Caribbean women
(we do get more
referrals for this
group than for men)

South Asian men

Chinese community

Also need to focus on areas of highest social deprivation (IMD 1-3) - this is captured to extent in the postcodes above.
